2018

Below you will find the Sixth IRG-Rail Market Monitoring report, covering data for 2016 and previous years from 28 European countries.

In the 2016 IRG-Rail report, particular emphasis has been placed on national practices in terms of regulation and monitoring of quality of rail passenger services.

The sixth annual market monitoring report is divided into two parts: the main report which presents over all results at the European level, and a working document in which country specific details are provided. Finally, data used to build graphics are, for the first time, directly available on the IRG-Rail website.

Main findings of the annual data collection cover the following areas:

- network characteristic and track access charges
- market players and global traffic
- freight and passenger markets
